

RF SCANNER — AS400 FIELD REFERENCE

DEPT 61 • MEAT DEPARTMENT • WAREHOUSE OPERATIONS

All confirmed RF option codes • February 2026 Guide • Personal Use Only

The RF scanner is a **full wireless AS400 session** — same system, same data as the manager's office terminal, on your hip. Most floor staff use it as a barcode lookup. **Supervisors use it as a running dashboard.** Every option below is a skill gap between you and the next person on the floor. Data entry note: the numeric keypad Enter key blanks the rest of a field and tabs forward — faster than space-tab. **Shift+F1-F12 = F13-F24.**

SECTION 01**ALL RF SCANNER OPTIONS****07****PRINT DEPOT LABELS**

Free-form text pallet labels

MEAT

Prints custom free-form text on pallet labels. You control what goes on the label. Used for staging, holds, and custom identification in the cooler.

HOW TO RUN

- 01** Select option **07** on the scanner
- 02** Select printer: **1** = Receiving (RCV) / **2** = RTV
- 03** Enter free-form text in the field
- 04** Enter number of tags to print → ENTER

■ MEAT DEPT USE

Label production holds, staged primal boxes, or overnight cut-prep. If a box of sub-primals is being held for a specific cut run, this label prevents it from being moved or confused with floor stock.

11

ITEM INQUIRY

Most-used option – on-hand, sales, ordered, sell price

CRITICAL**DAILY****MEAT**

Displays item detail by scanning a barcode or entering the item number. Shows department, on-hand in **dollars and units**, current week vs. previous week sales, ordered quantity, in-transfer, RTV, and sell price.

HOW TO RUN

- 01 Select option **11**
- 02 Scan barcode OR enter item number manually
- 03 Read the screen – all on-hand and sales data populates immediately

WHAT THE SCREEN SHOWS

- Dept** Department number
- CWk** Current week sales – dollars + units
- PWk** Previous week – comparison baseline
- OH** On-hand – current inventory in dollars + units
- Ord** On order – what's coming in
- Trn** In-transfer from another location
- RTV** Return to vendor quantity
- SEL** Current sell price

■ MEAT DEPT USE – YOUR PRODUCTION COMPASS

Run RF 11 on your top 5-10 movers before every shift. **On-hand vs. current week units tells you if you're overstocked or running thin.** If on-hand is high relative to this week's movement, cut less. If current week is burning through on-hand fast by mid-week, cut more and flag it. This is how a supervisor thinks – not just cutting by feel.

13

ITEM ALPHA INQUIRY

Search by item description — no barcode needed

MEAT

Look up items by description and/or department number. Two search fields, minimum 3 characters each required. Returns a list of matching items with department and item numbers.

HOW TO RUN

- 01 Select option 13
- 02 Enter description keyword(s) — **minimum 3 characters per field**
- 03 Optionally enter department number to narrow results
- 04 Review the list and select your item

■ MEAT DEPT USE

New seasonal items, roadshow products, anything without a scannable barcode. Also useful for verifying a new item has been correctly set up in the system before first production.

16

UPC INQUIRY

Barcode → item number lookup

MEAT

Scan or key a UPC barcode and get back the item description and item number. First step in diagnosing register scanning failures.

HOW TO RUN

- 01 Select option 16
- 02 Scan the UPC barcode OR key it manually
- KEY **Drop the last digit when keying manually** — that's the check digit

■ MEAT DEPT USE

When a package won't scan at the register or a scale label kicks back an error. Scan RF 16, verify the UPC is in the system and tied to the correct item. **If the UPC is set up but still not scanning → EPC download from the AS400 terminal pushes the fix.**

18

ITEM SALES REPORT

Print a sales report from the floor

MEAT

Creates and prints an item sales report for any set of items you specify. Scan or key each item you want on the report, then print it on F21.

HOW TO RUN

- 01 Select option 18
- 02 Enter warehouse number
- 03 Enter date — optional, leave blank for current
- 04 Scan or key each item number you want included
- F21 Press F21 to print

■ MEAT DEPT USE

Pull a quick report on your high-velocity items at end of shift. Write today's on-hand counts on the printout.

Keep a folder. That paper trail is what you show management when you talk production planning and when you push for advancement.

19

ITEM GROUP CODE MAINTENANCE

Build scan groups — batch your top items

UNDERUSED

MEAT

Create and maintain item groups — custom bundles of items you query together repeatedly. Build it once, use it forever. Eliminates scanning the same 20 items individually every single day.

HOW TO RUN

- 01 Select option 19
- 02 Enter a group name OR press F4 to select an existing group
- 03 Press F4 to add items — scan or key UPC or item number
- 04 Press F10 to review the current item list
- 05 Key 4 next to any item to remove it → press ENTER

■ MEAT DEPT USE — MASSIVELY UNDERUSED

Create a group for your department's top 20 movers. **Your daily on-hand check becomes a one-session scan instead of scanning 20 barcodes one by one.** Most wrappers don't know this exists. Supervisors who use it look like they own the data.

20

MERCHANDISE AUDIT ENTRY

Physical inventory count input

INVENTORY

CRITICAL

Scan or key item counts during physical inventory. Accepts multiple count entries per item and allows counts across multiple departments in one session.

HOW TO RUN

- 01 Select option 20
- 02 Scan or key each item number
- 03 Enter your count for each item
- 04 Multiple entries for the same item are accepted — they stack

■ MEAT DEPT USE — CRITICAL ON COUNT DAY

Costco runs **13 physical inventory counts per year** — one per 4-week fiscal period. Count day in meat is controlled chaos. The wrappers who know RF 20 get handed the scanner by the supervisor. Every count discrepancy that shows up later comes back to whoever was on the scanner. **Own RF 20, own the count.**

21

CLEAR MERCHANDISE AUDIT COUNT LIST

Wipes ALL counts from RF 20 — irreversible

⚠ IRREVERSIBLE

Clears ALL counts entered in option RF 20. No partial clear. Everything or nothing.

HOW TO RUN

- 01 Select option 21
- 02 Confirm to clear — counts are immediately gone

⚠ CRITICAL WARNING

Never hit RF 21 until RF 22 has printed and you have confirmed the report is correct. Firing this mid-count or before the report prints means the count is gone. You will have to recount. This mistake has burned people. The correct sequence is always: **RF 20 → RF 22 → RF 21** (if clearing is needed at all).

22

PRINT MERCHANDISE AUDIT REPORT

INVENTORY

Print the count from RF 20 – same output as MADR

Prints the count report from your RF 20 entries. Can print directly from the scanner or from the AS400 terminal. Produces the same report as AS400 option **MADR**.

HOW TO RUN

- 01 Select option **22**
- 02 Print from the RF scanner directly OR move to the AS400 terminal

MANDATORY SEQUENCE

RF 20 → Enter all counts

RF 22 → Print report – **verify it's correct before moving on**

RF 21 → Clear list – only if required and only AFTER the report is confirmed

23

EDP SIGN REQUESTS

MEAT

Print merchandise signs from the floor

Print standard EDP price signs directly from the scanner without going back to the AS400 terminal. Specify sign size, scan items, send to printer.

HOW TO RUN

- 01 Select option **23**
- 02 Enter the letter for sign size – **standard is S (small)** unless directed otherwise
- 03 Enter item number(s) OR scan UPC(s)
- F10 Press **F10** to review your item list before printing
- 04 Key **4** next to any item to remove it
- F21 Press **F21** to print
- 05 Select the appropriate printer → ENTER

■ MEAT DEPT USE

Price changes on markdown items, sign corrections during promotion events. Run your own sign prints from the cooler without tying up someone at the office terminal. That kind of self-sufficiency gets noticed.

36

PRINT PALLET TAG

Pallet ID tags – receiving and RTV

MEAT

Prints pallet identification tags with item info, quantity, optional PO number, and receiver initials.

HOW TO RUN

- 01 Select option 36
- 02 Select printer: 1 = RCV / 2 = RTV
- 03 Enter item number OR scan UPC
- 04 Enter quantity
- 05 Enter PO number and initials – *optional but strongly recommended*
- ENT Press ENTER to print

■ MEAT DEPT USE

Any primal shipment receiving or staging for RTV. **PO number and your initials on every tag = an accountability chain.** When a vendor dispute comes up – wrong count, wrong weight, wrong item – your tag is your proof. Supervisors who receive clean have far fewer disputes.

63

FRESH FOODS INVENTORY (FFI)

Fresh dept physical inventory – 13× per year

INVENTORY

CRITICAL

MEAT

RF scanner access point for FFI (Fresh Foods Inventory – input counts). Specifically for fresh ancillary departments: Meat, Deli, Bakery, Seafood. The AS400 terminal equivalent is the FFI option. Prompts for an Aisle designation then walks through count entry.

HOW TO RUN

- 01 Select option 63
- 02 Enter the Aisle identifier – **cannot be blank, system will error**
- 03 Enter counts by item
- F11 Press F11 to print from the RF scanner screen

■ MEAT DEPT USE – THIS ONE COUNTS TOWARD YOUR ADVANCEMENT

The fresh department physical count runs **13 times per year**. Every variance between your RF 63 entries and the system's expected on-hand shows up directly in the department P&L. **Supervisors are evaluated on shrink and inventory accuracy.** If you own the count and the department's variance is tight, that is a direct, documentable win to put in front of management when you ask about advancement. Refer to the AS400 Options for Fresh Foods Inventory guide on the Inventory Audit page for the full fresh-dept count workflow.

72

SCAN TRASH

Remove damaged / expired items
from inventory

WPM PASSWORD REQUIRED

HIGHEST CONSEQUENCE

Removes items from the warehouse's live inventory count when they are damaged, expired, or being disposed of. **Requires a separate WPM-issued username and password** — not your standard AS400 login. Credentials issued by WM or AWM only.

HOW TO RUN

- 01 Select option **72**
- 02 Enter WPM-issued username and password
- 03 Scan or key items being removed from inventory
- 04 Enter quantity in the Sell Unit field

REVERSALS

- **Same-day reversal:** Key a **negative amount** in the Sell Unit field in the same session
- **Older reversals:** Go through RTV using AS400 option **NSE18**
- **Research past entries:** AS400 option **TSH**

■ MEAT DEPT USE — HIGHEST CONSEQUENCE OPTION ON THIS LIST

Every pound scanned out here hits your department's shrink number **directly**. In a high-volume meat department running thousands of pounds a week, scan trash errors compound fast. That number shows up in the department P&L and managers see it. Running this option clean — with documentation on what you scanned and why — is exactly the kind of supervisor-level behavior that gets you promoted.

HARD RULES

- Never** scan out a pulled item without a physical tray or box in your hand.
- Never** reverse a scan trash entry without understanding its effect on inventory.
- Never** let anyone else use your Scan Trash credentials.

88**ITEM / UPC CROSS REFERENCE**

MEAT

All UPCs tied to one item – same as AS400 IXI

Enter an item number and see every UPC currently associated with it. Same function as AS400 option **IXI**. Primarily used when an item isn't scanning at the register.

HOW TO RUN

- 01** Select option **88**
- 02** Enter the item number
- 03** View all UPCs tied to that item
- KEY** If UPC is set up but not scanning → run **EPC** download from the AS400 terminal to push the fix

■ MEAT DEPT USE

Variable-weight meat items often have multiple PLUs and UPCs by pack size, grade, or label type. Tray of ribeyes won't scan at the register? RF 88 tells you immediately whether the UPC is in the system. **Not set up = item master issue → WM or buyer. Set up but not scanning = EPC download.**

98**ITEM / UPC CHECK**

MEAT

Item detail + sell price + multipack pricing

View item description, item number, associated UPC, and sell price. If the item contains multiple sell units (multipacks), shows the individual per-unit pricing as well.

HOW TO RUN

- 01** Select option **98**
- 02** Scan or enter UPC OR item number
- 03** Read screen – description, item #, UPC, sell price, per-unit price for multipacks

■ MEAT DEPT USE

Quick price verification before a member escalates a complaint. Verify multipack pricing is set correctly – a 2-pack of Choice ribeyes should show both the total price and per-pack breakdown. **Any discrepancy between what the sign says and what RF 98 shows goes to the office immediately.**

OPTION	NAME	ACCESS	PRIMARY USE
RF 07	Print Depot Labels	Standard	Custom pallet labels – free-form text
RF 11	Item Inquiry	Standard	Daily on-hand & sales check – use constantly
RF 13	Item Alpha Inquiry	Standard	Find item by description keyword
RF 16	UPC Inquiry	Standard	Barcode → item number lookup
RF 18	Item Sales Report	Standard	Print floor-level sales report
RF 19	Item Group Maintenance	Standard	Build batch scan groups for top movers
RF 20	Merchandise Audit Entry	Standard	Physical inventory count input
RF 21	Clear Audit Count List	Standard	WIPE counts – run AFTER RF 22 only
RF 22	Print Merchandise Audit Report	Standard	Print count report – always before RF 21
RF 23	EDP Sign Requests	Standard	Print price signs from the floor
RF 36	Print Pallet Tag	Standard	Pallet ID tags – receiving and RTV
RF 63	Fresh Foods Inventory (FFI)	Standard	Meat / fresh dept inventory counts 13× / year
RF 72	Scan Trash	WPM REQUIRED	Remove damaged / expired from live inventory
RF 88	Item / UPC Cross Reference	Standard	All UPCs tied to one item → same as IXI
RF 98	Item / UPC Check	Standard	Item detail + sell price + multipack pricing

SECTION 03

CAREER PRIORITY – MEAT DEPT TRACK

01**RF 11 — DAILY**

Run on your top items before every shift. Know the numbers before a manager asks. On-hand vs. current week = your production decision, made with data not instinct.

02**RF 63 + RF 20 — COUNT DAY**

Own the inventory count. Be the person the supervisor hands the scanner to. A tight count is a direct, documentable win for your advancement conversation.

03**RF 72 — PUSH FOR ACCESS**

Every dept has someone running Scan Trash. That person has elevated access and accountability. That's a supervisory function — push for it when trusted.

04**RF 19 — BUILD YOUR GROUPS**

Build a top-20 meat item group once. Your daily check becomes one scan session. This is visible efficiency that supervisors and merchandise managers notice.

05**RF 36 + RF 07 — RECEIVE CLEAN**

PO numbers and initials on every receiving tag. When vendor disputes happen, your documentation wins. Clean receiving = far fewer problems upstream.

06**RF 18, 22, 23 — LEARN, USE**

Useful but secondary at this stage. Know them. Use them when needed. Not your primary differentiators in the first 6 months.
