

# Frozen Seafood Deglazing

---

# Preferred Frozen Seafood Deglazing Method

## Steps:

1. All bagged product is to be taken out of the master case and slacked out on meat trays.
2. For larger boxes, we will need to open the lids on the case to slack.
3. The WIP label will be created from the actual PLU you will sell the item under. (e.g. PLU #39 for Whole Dungeness Crab = 7 days) and place the label directly on the item (see pictures). The Packed on and Sell by date that is on the label will stay with this product until it is sold or D&D.
4. Place the rack with all items in the D61 cooler.
5. When deglazing cooked AND raw, always ensure we follow "cooked over raw" slacking.
6. Most items will require 2-3 days on the slack rack in the cooler after being removed from the freezer. Plan accordingly.
  - a. Most ice glaze on the item should be able to be shaken off or if needed, quickly rinsed off following the "Alternative item de-glazing" procedures.
  - b. You can always return the slack rack to the cooler for an additional day if the product is not immediately needed for production.

# Alternate Frozen Seafood Deglazing Method

- 1) Using a purge eliminator placed in the 2 comp sink or dedicated seafood sink, Place product in purge eliminator and rinse with sprayer using cold water only.
- 2) It is not necessary to “thaw” the products. ONLY REMOVE THE EXTERIOR ICE GLAZE.
- 3) If product was previously on a slack rack, Tray products, wrap and label being sure to maintain the “packed on” and “sell by” dates from the label that was originally placed on them for the slack rack.

**Ultimately it will always be our responsibility to ensure 100% of ice glaze is removed from the product before it is displayed for sale.**
